

[Manipulator for Picking Areas]

The MZP is a self-contained articulated arm for fitting to an electric pallet truck. This innovative piece of equipment provides an ergonomic order preparation solution in the sphere of logistics and picking.

It enables manipulation of parts stored in racks, **under spars**, free from the constraints of an overhanging grip. Its **extra-fluid** concept, with dual-pivot joints, limits the sensation of load carrying, leaving users to concentrate on applying their skills. **Self-contained** as regards electrical power and vacuum, it has a **load capacity of 50 kg at 2m radius**. Several types of gripper can be fitted to the end of the arm and are interchangeable to suit the load being handled. Quick and easy to learn and operate, the MZP facilitates safe handling operations. It greatly helps reduce MSDs without sacrificing productivity.

- Adapts to most electric pallet truck models
- Compatible with a broad range of gripper types: suction cups, clamps, hooks, forks, etc.
